

# Enhance your agency's performance while caring for your patients.

*Point-of-care software for home health, hospice and private duty agencies for use on laptops and tablets with Sprint Mobile Broadband.*

*Home care agencies are under increasing pressures to deliver quality care within a fixed reimbursement environment. HealthWyse software and services are designed specifically to support the home care agency's clinical care while streamlining business processes and overall agency performance.*

## How it works

*HealthWyse offers an easy-to-use integrated clinical and financial system. Clinicians can choose from a Mobile Broadband-enabled card with their laptop or tablet PC as the point-of-care device. The clinical system includes intake, scheduling, point-of-care documentation (including OASIS, 485, visit notes, pathways and timesheets) for all disciplines, and management tools designed specifically for the Prospective Payment System (PPS). The complete electronic medical record is available to the field staff wirelessly at broadband-like speeds.*

*The billing system includes insurance management, utilization review, electronic billing, accounts receivable and collections, and a complete set of financial reports tailored to the needs of PPS.*

*The HealthWyse solution can handle a single agency with one location to a large multi-company multi-site organization. Clinical*

*practices can be reviewed at the level of a clinician, a team, a site, an agency or a company. Similarly, financial reports can be sorted multiple ways.*

*Hospice and palliative care organizations can use the HealthWyse Hospice solution with tailored forms for assessment, spiritual care, terminal care and bereavement. The tools are available for clinicians as well as other care providers such as clergy and volunteers.*

## Business benefits

*The point-of-care software streamlines the clinical workflow process. Alerts and automated emails guide clinicians and supervisors on the progress of the patient care process. Management of clinical care and business processes become automated and standardized. Built-in quality assurance checks highlight areas that need attention throughout the system.*

*The HealthWyse system provides the intelligence for agencies to manage their business proactively. Outcome Based Quality Improvement reports and adverse event reports are available in real-time. The order-driven scheduling system allows agencies to compare the costs of their care plan against the anticipated OASIS generated Home Health Resource Group reimbursement at*

*the beginning of the care episode. Profit/loss analysis is available real-time by clinician, referring physician, diagnosis, team, etc.*

*HealthWyse provides a hosted solution with 24x7 support which minimizes the need for onsite information technology staff. Data is securely hosted and backed-up by HealthWyse to address HIPAA disaster recovery requirements.*

*Sprint Mobile Broadband makes it possible for clinicians to use the application from virtually anywhere. Caregivers can also use it alongside other Sprint home healthcare solutions, such as GPS applications.*
